A.Authors: Wallin, E.; Hayes, W.S.; Borodovsky, M.; Karpk, P.D.; Smith, H.O.; Fraser,
A.Althe: The complete genome sequence of the gastric pathogen Helicobacter pylori.
A.Reference number: A64520; MuID:97394467
A.Status: preliminary; nucleic acid sequence not shown; translation not shown
A.Molecule type: DNA
A.Residues: 1-190 <TOM>
A.Cossion: GB:AE000554; GB:AE000511; NID:g2313475; PIDN:AAD07441.1; PID:g231

This is the amino acid sequence of the P45 component of the polymerase enhancing factor (PEF) of Pyrococcus furiosus DSM 3638.

The sequence is predicted from a DNA sequence (see AAW73844) are the from genomic DNA by PCR. P45 and P30 (see AAW72844) are the predominant components of PEF, which acts to enhance the activity of P. Furiosus DNA polymerase. P45 functions as a durpase, and can be reactions. The invention provides novel extracts, proteins and complexes that improve the polymerisation activity of nucleic acid polymerases, as well as DNA constructs and antibodies. Also polymerases, as well as DNA constructs and antibodies. Also included are methods for identifying compositions with PEF activity, for purifying and using these compositions, and specific extracts, proteins and complexes that function to enhance polymerase activity.

Mucleic acid polymerase reactions can be enhanced (claimed) by mixing a nucleic acid template, at least 1 polymerase and a composition having polymerase enhancing activity. Kits are provided for replicating nucleic acids sequencing or amplification
                                 Polymerase enhancing factor proteins, extracts and complexes - improve the polymerisation activity of nucleic acid polymerases, for use in amplification, sequencing and replication
                                                                                                           Claim 17; Page 43; 161pp; English
                                                                                                                                                                                                                                                                                                                                                                                                                                                                       (preferably PCR or RT-PCR)

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              ó
                                                                                                  This peptide comprises an N-terminal peptide of the P45 component of the polymerase enhancing factor (PEF) of Pyrococcus furiosus DSM 8638. It has been obtained from isolated P45; a full-length sequence is provided in AAM72847. PEF, the predominant components of which are P45 and P50 (see AAM72844) proteins, enhances the activity of P. furiosus DNA Polymerase, thereby providing activity of P. furiosus DNA Polymerase, thereby providing propling and possesses polymerase enhancing activity. The invention provides novel extracts, proteins and complexes that improve the provides novel extracts, proteins and complexes that improve the polymerisation activity of nucled activity. These peptide. Also included proteins including the P45 N-terminal peptide. Also included are methods for identifying and using these compositions, and specific extracts, proteins and complexes that include proteins including the P45 N-terminal peptide. Also included are methods for identifying and using these compositions, and specific extracts, proteins and compositions compositions at least 1 polymerase activity. Nucleic acid polymerase compositions at least 1 polymerase activity. Nucleic acid polymerase composition activity. Rits are provided for replicating nucleic acid enhancing activity. Rits are provided for replicating nucleic acid enhancing activity. Rits are provided for replicating nucleic acid acids. The Kits are provided for replicating nucleic acid acids. The Kits are provided for replicating nucleic acid acids. The Kits are provided for replicating nucleic acid acids. The Kits are provided for replicating activity.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              0; Gaps
Polymerase enhancing factor proteins, extracts and complexes -
improve the polymerisation activity of nucleic acid polymerases, for
use in amplification, sequencing and replication
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Polymerase enhancing factor; PEF; dUTPase; DNA polymerase; PCR; amplification; sequencing; replication.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            /note= "N-terminal peptide used to generate
primers"

Polymerase enhancing factor proteins, extracts and complexes -
improve the polymerisation activity of nucleic acid polymerases, for
use in amplification, sequencing and replication
                                                                                                                                                                                                                                                                                      This is an N-terminal peptide of the P45 component of the polymerase enhancing factor (PEF) of Pyrococcus furiosus DSM 3638. PEF, the predominant components of which are P50 (see AAW72844) and P45 (see AAW72847), enhances the activity of P. furiosus DNA polymerase. P45 functions as a dUTPase. The invention provides novel extracts, proteins and complexes that improve the polymerisation activity of nucleic acid polymerases. These can be used to improve nucleic acid replication, polymerisation and amplification (especially in PCR or RT-PCR).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             41.2%; Score 7; DB 19;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  HANDER STANDER                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          ö
                                                                                            This peptide comprises an N-terminal peptide of the P45 component of the polymerase enhancing factor (PEF) of Pyrococcus furiosus DSM 3638. It has been obtained from isolated P45. PCR primers (see AAV63861-64) based on the peptide were used to amplify P45 DNA (see AAV63860). A full-length P45 sequence is provided in AAW72847. PEF, a predominant component of which is P45 protein, enhances the activity of P. furiosus DNA Polymerase, thereby providing replication products of greater length and purity. P45 is a duTPase and possesses polymerase enhancing activity. The invention provides novel extracts, proteins and complexes that improve the polymerisation activity of nucleic acid polymerases. These complexes may included are methods for identifying compositions peptide. Also included are methods for identifying and using these compositions, and specific extracts, proteins and complexes that function to enhance polymerase activity. Nucleic acid polymerase compositions can be enhanced (claimed) by mixing a nucleic acid cumpanial template, at least 1 polymerase and a composition having polymerase enhancing activity. Kits are provided for replicating nucleic acid control acid composition having polymerase entains and acids. The kits are provided for replicating nucleic acids controls acids of the beach and accomposition having polymerase entains and composition having polymerase entains and composition having polymerase entains and composition having polymerase entains acids and accomposition having polymerase entains and acids and accomposition having polymerase entains accomposition accompositio
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Polymerase enhancing factor; PEF; DNA polymerase; dUTPase; PCR; amplification; sequencing; replication.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          acid sequencing or amplification (preferably PCR or RT-PCR).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Polymerase enhancing factor P45 protein N-terminal peptide.

```
to the complementary strand of a polynuclectide which comprises one of the S602 nuclectide sequences defined in the specification, where the oligonuclectide comprises at least 15 nuclectides; or (b) a combination of an oligonuclectide comprising a sequence complementary to the complementary strand of a polynuclectide which comprises a 5'-end sequence and an oligonuclectide comprising a sequence complementary to the sequence and an oligonuclectide comprising a sequence, where the oligonuclectide which comprises a 3'-end sequence, where the oligonuclectide which comprises a 3'-end sequence, where the oligonuclectide comprises a 1'-end sequence is selected from those defined in the 5'-end sequence/3'-end sequence is selected from those defined in the firedually! Full-length comprises a 1'-end be used in antisense therapy and in gene therapy. The primers are useful for synthesising polynuclectides, particularly full-length cDNAs. The primers are also useful for the detection and/or diagnosts of the abnormality of the proteins encoded by the full-length cDNAs. The primers allow obtaining of the full-length AHH3632 to AAH3632 to AAH363 to AAH36
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Protein identification; signal transduction pathway; metabolic pathway; hybridisation assay; genetic mapping; gene expression control; promoter; termination sequence.

AAC AAC7446 to AAC77606 encode the proteins given in AAB40237 to AAB43397, which represent the human ORFX open reading frames 1 to 3161. The ORFX sequences have activities such as: cytostatic; hepatotropic; vulnerary; sequences have activities such as: cytostatic; hepatotropic; vulnerary; catipsoriatic; antiparkinsonian; noctropic; neuroprotective; osteopathic; anticonvulsant; antiarthritic; immunosuppressant; immunostimulant; cardiant; thrombolytic; coaquiant; vasotropic; antidiabetic; hypotensive; dermatological; immunosuppressive; antidiabetic; hypotensive; dermatological; immunosuppressive; antidianematory; antibacterial; antiviral; antifungal; antirheumatic; antidiabetic; hypotensive; dermatological; immunosuppressive; antidianematory; antibacterial; antiviral; antichension of predisposition to, or preventing or treating the presence of or predisposition to, or preventing or treating the pathological conditions associated with an ORFX-associated disorder. The nucleic acids may be used to treat cancers, proliferative disorders, neurodegenerative disorders, osteoarthritis, colliferative disorders, neurodegenerative disorders, osteoarthritis, hypertension, hypothyroidism, cholesterol ester storrage, systemic lupus erythematosus, severe combined immunodeficiency (SCID), AIDS, viral, bacterial or fungal infection, malaria, auticimmune disorders, asthma, allergies, aplastic anaemia, burns, wounds, bone and cartilage damage, nectural heemoglobinuria, antiinfilammatory disease; to enhance companied impublic thrombosis; and as a contraceptive.
            Vulnetary; antipopoiatic; antiparkinsonian; notropic; neuroprotective; anticonvulsant; osteopathic; antiarthritic; immunosuppressant; cardiant; fundobytic; nequilart; vasotropic; antidiabetic; hypotensive; dermatological; immunosuppressive; antidiabetic; antidiabetic; antiviral; antibacterial; antifungal; antirheumatic; antithyroid; antiantenterial; antifungal; antirheumatic; antithyroid; antiantenterive disorder; proliferative disorder; hypertension; neurodegenerative disorder; osteoarthritis; hypothyroidism; SCID; AIDS; cardiovascular disease; diabetes mellitus; hypothyroidism; SCID; AIDS; severe combined immunodeficiency; malaria; autoimmune disorder; asthma; allergy; aplastic anaemia; nocturnal haemoglobinuria; burn; wound; bone damage; cartilage damage; antinflammatory disease; coagulation;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Novel nucleic acids and peptides derived from open reading frame X, useful for treating e.g. cancers, proliferative disorders, neurodegenerative disorders and cardiovascular disease -
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Claim 11; Page 1456-1457; 5507pp; English.

                                                                                                                                                                                                                                                                                                                                                                                20-JUL-2000
                      AAB25223;
full-length cDNAs defined in the specification. Where a primer set comprises: (a) an oligo-dT primer and an oligonucleotide complementary strand of a polynucleotide which comprises one of the 5602 nucleotide sequences defined in the specification, where the oligonucleotide comprises at least 15 nucleotides; or (b) a combination of an oligonucleotide comprising a sequence complementary to the complementary strand of a polynucleotide which comprises a 3'-end sequence complementary to the sequence and an oligonucleotide comprises a 3'-end sequence complementary to a polynucleotide which comprises a 3'-end sequence, where the coligonucleotide comprises a 3'-end sequence, where the polynucleotide which comprises a 3'-end sequence, where the combination of the 5'-end sequence; selected from those defined in the specification. The primer sets can be used in antisense therapy and the primers are useful for synthesising polynucleotides, particularly full-length cDNAs. The primers are also useful for the detection and/or diagnosis of the abnormality of the proteins encoded by the full-length cDNAs. The primers allow obtaining of the full-length cDNAs. The primers allow sequences; AAB92446 to AAH13633 to AAH13633 to AAH13632 represent human amino acid sequences; and AAH13629 to AAH13632. The present invarious and sequences; and AAH13632 to AAH13632
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Primer sets for synthesizing polynucleotides, particularly the 5602 full-length cDNAs defined in the specification, and for the detection and/or diagnosis of the abnormality of the proteins encoded by the

```
pine (Pinus radiata also known as Monterey pine). The protein sequences isolated from encalyptus (Bucalyptus grandis) or pine (Pinus radiata also known as Monterey pine). The protein sequences are involved in cell signalling. The polynucleotide and protein sequences can be used to modify the response of plant cells to external signals e.g. environmental changes or pathogens during the growth and development of a plant. They can be used to modify cell proliferation, differentiation, elongation and survival, resistance to disease and nutrient metabolism. Examples of modifications which can be produced are altered fruit ripening and senescence of leaves and flowers e.g. to delay senescence and prolong the life of cut flowers or enhance senescence of reproductive organs to engineer sterile plants. Other modifications can be used to delay senescence in selected cell types or organs providing fruit and vegetables which have a longer shelf life between harvest and consumption, or to'decrease branching frequency in forest tree species giving long stretches of valuable knot free clear wood which can be used in solid timber furniture and veneers.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                ö
